

“the **easiest** way to
clean, healthy **water**”

Filterpure Pleated Sediment Cartridges

Type:	Large surface area filtration
Application:	Typically whole house/commercial
Sizes:	10" Or 20" Lengths X 4.5" O.D. (Jumbo Sizes)
Colour:	White with blue ends. Labels colour coded by micron rating.
Material:	FDA approved pleated polyester With PVC end-caps and core.
Micron Rating:	5, 20
Product Codes:	10" - 5PP10J, 20PP10J 20" - 5PP20J, 20PP20J
Flow Capacity:	5,000 L/hr maximum per 10" length 10,000 L/hr maximum per 20" length
Service Life:	Clean and re-use when flow rate becomes too low or when head loss reaches 30 psi. Replace when cleaning is no longer effective.
Seal:	Universal crush fit
Max. Temp:	60°C

**Guide only, flows will vary with available pressure and with micron rating*

Technical Information

- Convenience of a cartridge filter and the economy of cleanability.
- High surface area pleated construction means longer run length, high flow rates, high dirt holding ability and low pressure drop.
- Can be cleaned under a tap or by gentle hosing.
- Severe cases can be soaked in diluted acid or other cleaner, appropriate to the deposits and then rinsed.
- Cartridges should be sterilised prior to reuse using a household bleach or Steritank HP.
- Reusability means that the cartridges cost less to **use** than disposable depth type cartridges as they can be cleaned several times before replacement is required (Note: 5 micron cartridges may only be cleanable once or twice).
- Thermally bonded to provide integral joints between the pliable end-caps
- Rigid centre core for added strength and long service life.
- Useful for low pressure applications, such as domestic supplies using header tanks or roof water.
- Primary use as a pre-filter for 1 micron cyst & polishing filters.
