

“the **easiest** way to
clean, healthy **water**”

Filterpure Spun Melt Sediment Cartridges

Type:	Depth filtration
Application:	Typically whole house sediment/cyst removal
Sizes:	10" & 20" Jumbo
Colour:	White
Material:	FDA approved polypropylene.
Micron rating:	1 micron
Flow capacity:	Peak flow up to 40 L/min for 10" Jumbo & 75 L/min for 25" Jumbo
Product codes:	10" = 1PS10J & 20" = 1PS20J
Service Life:	Depends on suspended solids level. Not cleanable
Seal:	Universal crush fit
Max. Temperature:	60°C

Technical Information

- Advantages in drinking, food and pure water applications.
- All food grade polypropylene - no gaskets, binders, fillers, loose fibres, centre core or surfactants to be concerned about.
- Extra-ordinarily clean with no extractables, meeting regulatory guidelines for use in food, pharmaceutical and potable water use.
- Consist of thousands of interlocked, thermally bonded fibres. The bonding means that fibres are less likely to shift with changes in flow or pressure, releasing contaminants downstream.
- Price no higher than the basic wound cartridge.
- In most applications on-line life is likely to be longer than a wound cartridge of the same rating.
- The 1 micron cartridge has a Cryptosporidium cyst removal rating of >99%.

Applications

- Suitable for a wide range of applications for drinking water, beverage industry, mineral water bottling, laboratory use, food industry, pre-filtration ahead of sub-micron filters or Reverse Osmosis and other industrial applications where low contamination levels are needed.
- Main use is a sediment and cyst removal filter in drinking water applications.
- Can be used on its own with clean rain water supplies but a cleanable pre-filter is generally recommended.
